O

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                     New modified anti-angiogenic kringle 5 peptides capable of forming conjugates with blood proteins, useful for treating angiogenesis, inappropriate invasion of vessels or cancers in humans or mammals

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           osteopathic activities, and is an angiogenesis inhibitor. (I) are useful CC for treating angiogenesis in a human, where the derivative is reacted CC with blood proteins. (I) are also useful for manufacturing a medicament CC extending the in vivo half-life of a kringle 5 peptide in a patient to CC provide an anti-angiogenic effect. In particular, a modified kringle 5 peptide can be used for treating inflammatory disorders (e.g. immune inflammation, chronic articular rheumatism or psoriasis), CC disorders associated with inappropriate or inopportune invasion of CC vessels (e.g. diabetic retinopathy, neovascular glaucoma, restenosis, CC capillary proliferation in atherosclerotic plaques or osteoporosis), or CC metastases, angiofibromas, retrolental fibroplasia, haemangiomas, CC Kasposi's sarcoma or other cancers requiring neovascularisation to CC support tumour growth). The peptides are useful for treating these CC diseases in mammalian or human patients. AAB3562 represents a mammalian or human patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

The reactive group is selected from succinimidyl or maleimido groups. (1) can have anti-inflammatory, vasotropic, cytostatic, antifibeumatic, antifibeumatic, antifibeumatic, antification antifibeumatic, antifibeumatic, antification antifibeumatic, an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   kringle 5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   joints, wound granulation, ulcers etc., also as contraceptives that inhibit ovulation and establishment of the placenta. K5 antisera or (ant)agonists can be used similarly, optionally coupled to cytotoxic agents. Antagonists may be used to induce angiogenesis, e.g. for wound healing. The K5 peptides are also used to raise specific antibodies (Ab), for diagnosis and for affinity purification of K5 receptors. The K5 receptors may then be expressed in tumour cells to increase their response to the peptides or used for identification of smaller antagonists. The Ab are used to detect/quantify the peptides in biological samples. The K5 peptides (and K5 fusion proteins) selectively inhibit proliferation of endothelial cells with low toxicity against normal cells. Typically they have 800-times greater inhibitory activity against bovine capillary cells in vitro than kringle 1-4 peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         particularly primary or metastatic solid tumours, carcinomas, sarcomas, lymphomas, haemangionas. They can also be used for treating or preventing psoriasis, arthritis, macular degeneration and diabetic retinopathy. The fragments can also be used to treat autoimmune or ocular diseases, capillary proliferation within atherosclerotic plaque, haemophiliac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence is synthetic a kringle 5 (K5) peptide homologous to human plasminogen. K5 peptide fragments homologous to this sequence, are

The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoietic malignancies such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Preparation of Kringle five peptide fragment for treating various disorders such as angiogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by incubation and isolation -
                                                                                                  (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber Syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01888, AAB01889 and AAB01895-B01905 represent human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 4; Column 36; 48pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The specification describes a method for generating angiostatin in CC vitro. The method comprises contacting plasminogen with a sulfydryl CC donor, or culturing cells capable of producing plasminogen activator CC in conditioned culture medium (CCM) and contacting the CCM with CCC plasminogen. Angiostatin produced by method of the invention is useful CC for treating animals with angiogenesis disease. It is useful for CCC treating an angiogenic disease such as neoplastic diseases (e.g. tumours CCC and tumour metastasis), benign tumours (e.g. hemangiomas, acoustic CCC neuromas, etc), connective tissue disorders (e.g. rheumatoid arthritis CCC neuromas, etc), connective tissue disorders (e.g. rheumatoid arthritis CCC cretinopathy, corneal graft rejection, etc), cardiovascular diseases, CCC cerebral vascular diseases, diabetes-associated diseases and immune CCC disorders (e.g. chronic inflammation and autoimmunity). The present cCC sequence represents an antigenic peptide derived from human angiostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders.
                                                                                                                                                                                                                                                                                                                                                  17-MAY-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     therapeutic agent and a reactive group which reacts with groups on pulmonary or blood components to form a stable covalent bond, where the therapeutic agent may be a peptide. Pulmonary drug delivery is useful as it increases the drug retention-time in the lungs and reduces the risk of extrapulmonary side effects. Modified therapeutic agents of this type may be antihistamines, anti-angina, anti-hypertensive or anti-arrhythmic agents, anti-depressants, bronchodilators, opioids or their analogues, anti-inflammatory agents, or anti-thyroid deficiency agents. The present sequence is a kringle peptide.
                                                                                                                                                           Disclosure; Page 611; 733pp; English.

                                  groups. (I) can have anti-inflammatory, vasotropic, cytostatic, antirheumatic, antipsoriatic, antidiabetic, antiarteriosclerotic and osteopathic activities, and is an angiogenesis inhibitor. (I) are useful for treating angiogenesis in a human, where the derivative is reacted with blood proteins. (I) are also useful for manufacturing a medicament extending the in vivo half-life of a kringle 5 peptide in a patient to provide an anti-angiogenic effect. In particular, a modified kringle 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antiarteriosclerotic; osteopathic; angiogenesis inhibitor; angiogenesis; inflammatory disorder; inflammation; chronic articular rheumatism; psoriasis; diabetic retinopathy; neovascular glaucoma; restenosis; capillary proliferation; atherosclerotic plaque; osteoporosis; cancer; solid tumour; angiofibroma; retrolental fibroplasia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases in the large molecules decreases
                                                                                                                                                                                                                                                                                               The present invention describes a modified anti-angiogenic peptide comprising a reactive group that reacts with amino groups, hydroxyl groups or thiol groups on blood components to form stable covalent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New modified anti-angiogenic kringle 5 peptides capable of forming conjugates with blood proteins, useful for treating angiogenesis, inappropriate invasion of vessels or cancers in humans or mammals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Kringle 5; anti-angiogenic; modified; blood protein; anti-inflammatory;
vasotropic; cytostatic; antirheumatic; antipsoriatic; antidiabetic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mammalian kringle 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-MAR-2001

can

bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.

growth

The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (II) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8×88888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                              The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity
in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the
                                                                                                                                                                                                                                                                                                  Disclosure; Page 611; 733pp; English.

                              peptide can be used for treating inflammatory disorders (e.g. immune and non-immune inflammation, chronic articular rheumatism or psoriasis), disorders associated with inappropriate or inopportune invasion of vessels (e.g. diabetic retinopathy, neovascular glaucoma, restenosis, capillary proliferation in atherosclerotic plaques or osteoporosis), or cancer associated disorders (e.g. solid tumours, solid tumour
                                                                                                                                                                                                                                        comprising a reactive group that reacts with amino groups, hydroxyl groups or thiol groups on blood components to form stable covalent bonds. The reactive group is selected from succinimityl or maleimido groups. (I) can have anti-inflammatory, vasotropic, cytostatic, antirheumatic, antipsoriatic, antidiabetic, antiarteriosclerotic and antirheumatic, antipsoriatic, antidiabetic, antiarteriosclerotic and
                                                                                                                                                                with blood proteins. (I) are also useful for manufacturing a medicament extending the in vivo half-life of a kringle 5 peptide in a patient to
                                                                                                                                                                                                                                                                                                                                                                                                                                      New modified anti-angiogenic kringle 5 peptides capable of forming conjugates with blood proteins, useful for treating angiogenesis,
                metastases, angiofibromas, retrolental fibroplasia, haemangiomas
                                                                                                                                                    provide an anti-angiogenic effect.
                                                                                                                                                                                                          osteopathic activities, and is an angiogenesis inhibitor. (I) are useful for treating angiogenesis in a human, where the derivative is reacted
                                                                                                                                                                                                                                                                                                                                            The present invention describes a modified anti-angiogenic peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-090970/10.

The protein can be used to treat angiogenesis mediated diseases, e.g. haemangioma, solid tumours, leukaemia, metastasis, telangiectasia, psoriasis, scleroderma, pyogenic granuloma, myocardial angiogenesis, plaque neovascularisation, coronary or cerebral collaterals, arteriovenous malformations, isohemic limb angiogenesis,
Sequence
                                                                               muscular degeneration, peptic ulcer, Helicobacter related disease, fractures, keloids, vasculogenesis, haematopoiesis, ovulation, menstruation, placentation or cat scratch fever, and to stimulate wound healing. The protein and antibodies generated from it can be used to screen for agonists and antagonists or in detection, imaging and
                                                                                                                                                                                                                                                      corneal diseases, rubeosis, neovascular glaucoma, diabetic retinopathy,
                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence is an isolated fragment of the Kringle 5 peptide corresponding to amino acid 462 of the human plasminogen protein which can be used in a novel method to inhibit endothelial cell proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Page 8; 51pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Plasminogen Kringle 5 peptide - which inhibits endothelial cell proliferation, useful to treat angiogenesis mediated diseases and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   03-JUL-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Plasminogen; Kringle 5; cell proliferation inhibitor; angiogenesis; diagnosis; therapeutic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human plasminogen Kringle 5 fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             support tumour growth). The peptides are useful for treating these diseases in mammalian vuman pattents. AAB36562 represents a mammalian kringle 5 protein, and AAB36563 to AAB36577 represent specifically claimed kringle 5 peptides from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                  The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoletic malignancies such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases.
                                                                                        diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber Syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01916-B01919 represent fragments of human plasminogen used in an exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ₽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                            anti-angiogenic polypeptide such as a non-catalytic region of human plasminogen. The MBEs interact independently with thermodynamic additivity, with components of the vascular endothelium. (I) provide targeted delivery of the anti-angiogenic polypeptide to cell membranes and sites of active angiogenesis, particularly the vascular endothelium, and therefore increase the local concentration and reduce the risk of adverse effects on normal processes elsewhere in the vasculature. They are used in a claimed method of treatment of primary or secondary tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide. The invention relates to new soluble delivatives (1) of anti-angiogenic polypeptides. (I) comprise 2 or more heterologous membrane binding elements (MBES, see AAYS8855-61) with low membrane affinity that are covalently attached to a soluble low membrane affinity that are covalently attached to a soluble
                                          AAB01917 standard; Protein; 93 AA.
                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of human plasminogen mature polypeptide. The invention relates to new soluble derivatives (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New soluble derivative of anti-angiogenic polypeptide useful for treatment of primary or secondary cancers, contains covalently attached
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2000-182406/16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16-JUL-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequences AAB01906-B01919 represent fragments of human plasminogen used in an exemplification of the invention.

Note: This sequence is not shown in the specification, but is derived from the full length human plasminogen sequence (AAB01887) shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratt disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Preparation of Kringle five peptide fragment for treating various disorders such as angiogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human plasminogen kringle 5 (Val454-Phe546)
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

In the presence of the inhibitor, the activation involves also removal of the activation peptide.

C;Comment: Stromelysin 1 (see PIR:KCMSS1) acts on plasminogen to produce angiostatin. To
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Cross-references: GB:J04766; NID:g200402; PIDN:AAA50168.1; PID:g200403 R;Lijnen, H.R.; van Hoef, B.; Beelen, V.; Collen, D.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             eful in treating solid tumors.

(c)Function:

A;Description: dissolves the fibrin of blood clots; acts as a proteolytic factor in a vans the walls of the graafian follicle; also activates the urokinase-type plasminogen act
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A; Reference number: S48202;

                                                                                                                                                                                                                                                                                                                                                                                                                                                        A PROTECLYTIC FACTOR IN A VARIETY OF OTHER PROCESSES INCLUDING EMBRYONIC DEVELOPMENT, TISSUE REMODELING, TUMOR INVASION, AND INFLAMMATION; IN OVULATION IT WEAKENS THE WALLS OF THE GRAPFIAN FOLLICLE. IT ACTIVATES THE UROKINASE-TYPE PLASMINGEN ACTIVATOR, COLLAGEMASES AND SEVERAL COMPLEMENT ZYMOGENS, SUCH AS CI AND C5. IT CLEAVES FIBRIN, FIBRONECTIN, THROMBOSPONDIN, LAMININ AND YON WILLEBRAND FACTOR.
                                                                                                                                                                                                ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND TO FIBRIN. CANNOT BE ACTIVATED WITH STREEPFOKINASE.

MISCELLANEOUS: PLASMIN IS INACTIVATED BY ALPHA-2-ANTIPLASMIN INMEDIATELY AFTER DISSOCIATION FROM THE CLOT.

MISCELLANEOUS: IN THE PRESENCE OF THE INHEBITOR, THE ACTIVATION INVOLVES ONLY CLERVAGE AFTER ARG-581, RESULTING IN 2 CHAINS HELL TOGETHER BY 2 DISULFIDE BONDS. WITHOUT THE INHIBITOR, THE ACTIVATION INVOLVES ALSO REMOVAL OF THE ACTIVATION PEPTIDE.

SIMILARITY: CONTAINS 5 KRINGLE DOMÁINS.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS THE TRYPSIN FAMILY. PLASMINOGEN SUBFAMILY.
                                                                                                                               European Bioinformatics Institute
                                                                                                                                                                                                                                                                                                                                                                                               METASTATIC TUMORS IN VIVO.

ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN
